Please include a detailed description of the issues, as well as a description of and a copy of any professional studies, citations or reports from government entities, recommended solutions, and any cost information or estimates. If additional space is needed, please attach.

Type detailed description here Type detailed description here
Westview High School was built in 1989-1990 and we are currently having failures in the HVAC system. The actuators on the zone dampers, bypass dampers, and EMS system has failed. We also have four 5-ton a/c units in the 900 building, three 4-ton a/c units and one 5-ton a/c unit in the 100 building that have failed and repairs at best last a short period. These units are over 16 years old and had PM performed on them in accordance to SFB standards. The approximate cost is \$350,000.00 for these repairs. I have estimates coming from contractors and will provide them as soon as they are obtained. Although the district has been proactive in replacing units throughout Westview High School now we need your assistance in completing the final repairs. The remaining building renewal balance of \$15,749.00 will be applied to this project. This project is critical to the operation of the school with respect to health and providing an environment that meets the state classroom standards. Engineering study will be paid by the District and should be forthcoming shortly.

Available Funding

Please provide the following:

Current building renewal fund balance (Fund 690):	\$15,749.00
Planned building renewal expenditures for the balance of the fiscal year:	\$0.00

As a separate attachment, please provide a list of current fiscal year building renewal expenditures.

Please outline any associated insurance coverage and why this issue is not covered by insurance.
